"Synopsis The concept of sustainable development has become very much a hot potato where policies affecting development and growth are concerned. It is therefore important that environmental lawyers investigate the available conceptual tools of their trade and consider how legal principles and processes can themselves develop more sustainably. Sustainability, Land Use and Environment comprehensively covers the current issues in this area. It focuses on land use, a topic at the heart of attempts to find sustainable solutions. It will be invaluable to practitioners and students of environmental law. Über den Autor und weitere Mitwirkende Mark Stallworthy, BA, LL.M, is Senior Lecturer at Norwich Law School, University of East Anglia."
