"L'autore The contents reflect the work of the Building Conservation and Research Team, their colleagues at Historic England, and their consultants and researchers, who together have many decades of accumulated experience in dealing with deteriorating building materials and systems of all types. This multi-disciplinary team of architects, surveyors, conservators and scientists are responsible for standard setting and research across a wide range of Historic England activities. The team specialises in dealing with the practical, technical and scientific aspects of building materials decay and their treatment. The aim has been to provide practical advice by advocating a common approach of firstly understanding the material or building element and why it is deteriorating, and then dealing with the causes. The books concentrate on those aspects which are significant in conservation terms, and reflect the requests for information received by Historic England."

The bm trada bookshop brings together publications on building materials for construction professionals in one place here you can find books on timber glass brick and block concrete hybrid and natural materials from a range o
