Oliver Sacks' compassionate tales of people struggling to adapt to different neurological conditions have fundamentally changed the way we think of our own minds. In Musicophilia, he examines the powers of music through the individual experiences of patients, musicians and everyday people - those struck by affliction, unusual talent and even, in one case, by lightning - to show not only that music occupies more areas of our brain than language does but also that it can torment, calm, organise and heal. Always wise and compellingly listenable, these stories alter our conception of who we are and how we function and show us an essential part of what it is to be human.
