"Comprehensive . . . an excellent introduction to the subject." & Electronic Engineer's Design Magazine. This introductory textbook, aimed at sophomore- and junior-level undergraduates in mathematics, engineering, and the physical sciences, offers a smooth, in-depth treatment of linear algebra and matrix theory. The major objects of study are matrices over an arbitrary field. Contents include Matrices and Linear Systems; Vector Spaces; Determinants; Linear Transformations; Similarity: Part I and Part II; Polynomials and Polynomial Matrices; Matrix Analysis; and Numerical Methods. The first seven chapters, which require only a first course in calculus and analytic geometry, deal with matrices and linear systems, vector spaces, determinants, linear transformations, similarity, polynomials, and polynomial matrices. Chapters 8 and 9, parts of which require the student to have completed the normal course sequence in calculus and differential equations, provide introductions to matrix analysis and numerical linear algebra, respectively. Among the key features are coverage of spectral decomposition, the Jordan canonical form, the solution of the matrix equation  $AX = XB$ , and over 375 problems, many with answers.

**A thorough first course in linear algebra this two part treatment begins with the basic theory of vector spaces and linear maps including dimension determinants eigenvalues and eigenvectors the second section addresses more advanced topics such as the study of canonical forms for matrices a**

Free shipping on orders of 35 from target read reviews and buy matrices and linear transformations dover books on mathematics 2 edition by charles , 1 the algebra of matrices 2 linear equations 3 vector spaces 4 determinants 5 linear transformations 6 eigenvalues and eigenvectors 7 inner product spaces 8 applications to differential equations for the second edition the authors a, get this from a library matrices and linear transformations charles g cullen undergraduate level introduction to linear algebra and matrix theory deals with matrices and linear systems v.
