"Críticas An insightful primer for students and young professionals looking to formulate and develop enduring architectural design strategies... Tait offers clear guidance on how to assess, analyze, augment and assemble meaningful architectural experiences... [His] greatest strength is his ability to unpack and demystify the discussion surrounding the architectural design process. Written in a straightforward style, his book is a refreshing break from the scholarly jargon and esoteric hyperbole so common in architectural publications. Reseña del editor Inspired by the complexity and heterogeneity of the world around us, and by the rise of new technologies and their associated behavior, The Architecture Concept Book seeks to stimulate young architects and students to think outside of what is often a rather conservative and self-perpetuating professional domain and to be influenced by

everything around them. Organized thematically, the book explores thirty-five architectural concepts, which cover wide-ranging topics not always typically included in the study of architecture. James Tait traces the connections between concepts such as familiarity, control, and memory and basic architectural components such as the entrance, arch, columns, and services, to social phenomena such as gathering and reveling, before concluding with texts on shelter, relaxing, and working. Even in a digital age, Tait insists that "we must always think before we design. We must always have a reason to build." Each theme is accompanied by photographs, plans, and illustrations specifically drawn by the author to explain spatial ideas, from small scale to the urban. Biografía del autor James Tait was the Winner of the RIBA and RIAS Silver Medals in 2008 and has since been a regular guest critic at the University of Strathclyde in Scotland. He has also exhibited his work extensively in Scotland, London, and the Far East."
