A controversial idea currently under vigorous and passionate international debate that would recognize the "human signature" on the planet. Anthropocene is the latest book by Edward Burtynsky, Jennifer Baichwal, and Nicholas de Pencier to chronicle the massive and irreversible impact of humans on the Earth -- on a geological scale. In photographs that are both stunning and disconcerting, Burtynsky, Baichwal, and de Pencier document species extinction (the burning of elephant tusks to disrupt the illegal trade of ivory), technofossils (swathes of discarded plastic forming geological layers), and terraforming (mines and industrial agriculture). The book also features a range of essays by artists, curators, and scientists, some part of an international group of scientists who have proposed that the Earth is now entering a new era of geological time where human activity is the driving force behind environmental and geological change -- i.e. the Anthropocene. Thus the book brings contemporary art into conversation with environmental science and anthropology on a topic that urgently affects all of us. Anthropocene will be published to coincide with a major international exhibition opening simultaneously in September 2018 at the Art Gallery of Ontario and the National Gallery of Canada and the release of a film on the same topic by Baichwal and de Pencier. The exhibition will travel to Fondazione MAST in Bologna in the spring of 2019.

**An investigation of human influence on the state of the earth is profiled through the photographs by Edward Burtynsky, the films by Jennifer Baichwal and Nicholas de Pencier, and augmented reality installations that are the multidisciplinary work of the Anthropocene project.**

Anthropocene 5 969 likes 201 talking about this film book and museum show, the National Art Gallery in Ottawa currently hosts a sensational exhibition called Anthropocene. Edward Burtynsky's Anthropocene is the newest book by Edward Burtynsky to document human destruction of the earth on a geological scale in photos as beautiful as they are disconcerting. Burtynsky explores issues such as extinction, large scale burning of elephant tusks to disrupt illegal trade and the black market, the plight of the world's oceans, and the impact of climate change.
