L'uvéite est une inflammation primitive de la tunique intermédiaire de l'oeil. Elle peut toucher les patients à tout âge et représente la troisième cause de cécité dans le monde. Sa prise en charge doit être méthodique car ses étiologies sont extrêmement variées. Elles peuvent être limitées à l'oeil ou associées à une maladie de système d'origine auto-immune auto-inflammatoire ou infectieuse bénignes ou potentiellement cécitantes. L'analyse d'une uvéite nécessite une démarche raisonnée précise souvent multidisciplinaire basée sur un examen sémiologique complet d'une part et des examens complémentaires parfois sophistiqués d'autre part. Voici le premier ouvrage de référence francophone sur le sujet. La première partie regroupe l'ensemble des données générales portant sur les mécanismes immunologiques les dernières classifications disponibles les diagnostics différentiels les investigations étiologiques ou fonctionnelles et enfin les stratégies thérapeutiques médico-chirurgicales ainsi que la prise en charge des complications. Chaque entité spécifique est ensuite présentée avec précision dans la deuxième partie de l'ouvrage. Enfin les grands syndromes inflammatoires et infectieux sont revus dans les derniers chapitres sous forme de conduites à tenir incluant des arbres décisionnels afin de faciliter leur mémorisation. Au sein de cette seconde édition une place de choix a été réservée aux différentes méthodes d'imagerie et aux techniques d'analyse moléculaire utilisées à visée diagnostique. Ce livre est un guide pratique rédigé par près d'une centaine d'experts francophones ou anglo-saxons. Il s'agit d'un outil indispensable pour tout ophtalmologiste interniste rhumatologue neurologue pédiatre ou généraliste prenant en charge des patients atteints d'uvéite. Il sera également utile aux internes et assistants en formation qui souhaitent compléter leurs connaissances dans un domaine aussi vaste que celui de l'inflammation intraoculaire.
